

Committed to valuable actions

Konecranes Environmental Policy

In Konecranes, we do not believe in empty promises. We take all our commitments seriously and want to live by the fact that actions speak louder than words. We deliver our environmental commitments through real improvements and valuable work – building up benefits both for the business and the environment, simultaneously.

AWARENESS

We are aware of the current state of our planet; the future risks confronting the environment and impacts it has on each and every citizen and community. Resource scarcity, climate change, water crisis and deterioration of our biodiversity are facts all companies have to address. Konecranes acknowledges its responsibility and the opportunity to affect environmental matters, especially on the efficient use of the earth's resources and the effects of climate change.

Konecranes is a sum of its employees, stakeholders, and resources around us. Even this fact alone motivates us to continuously improve our operations to protect the environment. By protecting the environment, we also protect our people, resources, brand, and business as a whole.

COMMITMENT

Konecranes is committed to:

- Protecting the environment by preventing and minimizing harmful discharges into air, water and ground
- Using resources efficiently
- Meeting or exceeding applicable environmental laws and regulations
- Providing eco-efficient solutions and services to customers

FOCUS ON EFFICIENCY

One of Konecranes' key objectives is continued growth. To achieve this, we must accept world's limited resources and find even better ways to make use of what we have. When it comes to sustainable growth, efficiency is the key.

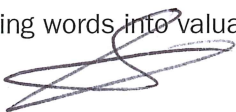

The cutting edge of our environmental work is to continuously improve energy and resource efficiency, considering both our operations and products. Within our products, the whole life-cycle is taken into consideration.

Use phase of Konecranes' products can be even decades, and this is why significant environmental improvements can be achieved through smarter and more resource-efficient offering. Making our offering even better by utilizing the possibilities of industrial internet is one of Konecranes' strategic initiatives. With regard to resource-efficiency, the concept of circular economy is providing us interesting opportunities to consider different business models and achieving environmental footprint reduction on the full lifecycle level. Significant savings could be obtained through renting, repairing, modernizing, reusing, and recycling our products.

MOVING FORWARD

To succeed in our environmental work, we need every Konecranes employee to stand behind this environmental policy and give their contribution towards it. No matter how small the actions are, they are all moving us forward. Big and challenging changes are made of small improvements.

Turning words into valuable actions,

Panu Routila
President and CEO
